

TI F28379D LaunchPad

From Basics to Motor Control Foundations

GPIO, Interrupts, Clocks, ePWM & ADC
Hands-On with LAUNCHXL-F28379D, SysConfig & Driverlib

eMotorlabs.com

Chapter 1: Introduction to the F28379D & C2000 Family

- 1.1 What is the C2000 Family & Why Does It Exist?
- 1.2 The C2000 Family: From Entry Level to High Performance
- 1.3 Inside the F28379D: Architecture That Makes It Special
- 1.4 The LAUNCHXL-F28379D Board: A Physical Walkthrough
- 1.5 Software Tools for the F28379D

Chapter 2: Setting Up & Your First F28379D Project

- 2.1 F28379D vs STM32 NUCLEO-G431RB: Key Differences
- 2.2 Installing Code Composer Studio & C2000Ware
- 2.3 Creating Your First Project Using SysConfig & Driverlib
- 2.4 Walking Through the Generated Project Files
- 2.5 Blinking the Onboard LED: First Running Program
- 2.6 Using the CCS Debugger & Expressions Window
- 2.7 Real-Time Data Monitoring with CCS Scripting & Live Graphs

Chapter 3: How Code Becomes Action on the F28379D

- 3.1 The Compilation & Linking Pipeline
- 3.2 Memory Map of the F28379D
- 3.3 Running Code from RAM vs Flash
- 3.4 GPIO Muxing: What Is Really Happening Under the Hood
- 3.5 Peripheral Registers as Memory: How Driverlib Works Under the Hood
- 3.6 Dual Core & CLA: An Awareness Overview

Chapter 4: GPIO & Interrupts

- 4.1 GPIO Modes on the F28379D
- 4.2 Configuring GPIO with SysConfig & Reading a Button
- 4.3 The PIE Interrupt Controller: F28379D Interrupt Architecture
- 4.4 GPIO External Interrupts (XINT)
- 4.5 Practical Exercise: LED Toggle on Interrupt with ACK Confirmation

Chapter 5: Clock System & Watchdog

- 5.1 The F28379D Clock Tree
- 5.2 Configuring 200 MHz System Clock in SysConfig
- 5.3 The Watchdog Timer
- 5.4 CPU Timer: The SysTick Equivalent on F28379D

Chapter 6: ePWM - Enhanced PWM Module

- 6.1 ePWM Architecture Overview
- 6.2 Time Base & Counter Compare: Setting Frequency and Duty Cycle
- 6.3 Action Qualifier: Deciding What Happens at Each Counter Event
- 6.4 Dead Band Module
- 6.5 Trip Zone Module: Hardware Fault Protection
- 6.6 Event Trigger: Connecting ePWM to the ADC
- 6.7 PWM Chopper
- 6.8 Generating 3-Phase Complementary PWM on ePWM1, ePWM2, ePWM3

Chapter 7: Analog to Digital Conversion

- 7.1 F28379D ADC Architecture Overview
- 7.2 Single Channel ADC in Software Trigger Mode
- 7.3 ADC Triggered by ePWM
- 7.4 Simultaneous Sampling Across Multiple ADC Modules
- 7.5 ADCINT Trigger Chaining & Post-Processing
- 7.6 ADC Calibration & the PPB Offset
- 7.7 DMA Awareness: Moving ADC Results to Memory Automatically
